

Jules — Compliance Review for Client Work

Reviews a deck or report slide by slide against the compliance rules and records a hash-based approval, so client work clears review before it goes out.

Per-slide checks, not a black box

Jules reviews each slide of a deck against the compliance rules and records the result for that slide — so you can see exactly what passed and what needs attention.

- Each slide is checked individually against the rules.
- You see which slides are clear and which need a change.
- No deck upload step — it works on the deliverable in place.

Approval you can prove

When a slide passes, Jules records a hash-based approval — a tamper-evident stamp tied to that exact content. Change the slide and the approval no longer matches, so nothing slips out altered after sign-off.

- A clear, recorded approval per slide.
- Re-edited content shows as no longer approved.
- A defensible trail that review actually happened.

Open Jules

Jules has just appeared in your sidebar — open it there to run a compliance pass before your next deck or report goes to a client.
