

Minerva — Research & Charts

The research workbench: deeper analysis, charts, and PDF/Excel exports — the finished artefact you take into a meeting, with the right data source chosen for you.

Go deeper, make me a chart, give me a file

Ask a data or analysis question and Minerva picks the right source behind the scenes, then hands back something finished.

- **Charts** — plot any economic indicator, compare countries, visualise a trend.
- **Deep analysis** — sovereign credit with economic data, political context and ratings together.
- **Files** — export any analysis or chart as PDF or Excel, ready for a report or deck.

The right specialist, chosen for you

Minerva routes each question to the specialist that fits — US data, IMF, World Bank, political context, ratings — so you don't have to know which source to ask. You get the answer; it handles the plumbing.

- One question, the right data source chosen automatically.
- Multiple sources combined into a single view.

Open Minerva

Minerva has just appeared in your sidebar — open it there when you need a chart, a deeper analysis, or a finished file to hand on.
